A message from our Managing Director

I have walked through more than a thousand villages across Nakasongola, Kayunga, Nakaseke, Buikwe and other districts.† Too often I found families carrying water over long distances, cattle weakened by the dry seasons and farms that could not be watered.

I started Shark because these problems can be solved, and solved properly. We find the water first, through careful underground survey. We build to standard, with permitted specialists and honest records. And we train local people, so that every system keeps flowing long after we have left.

We are a new company and we say so openly. Our registration is in progress, and we will share each step and each result as it comes. What we bring is field knowledge, a clear method and a commitment to integrity.

I invite government, companies and development partners to work with us, starting with a pilot that proves the method.

Hassan Maweje, Managing Director

[CONFIRM: Hassan to review, edit and approve this message before the profile is sent to anyone]

Who we are

Shark is a Ugandan freshwater supply and construction company founded by Hassan Maweje. Our headquarters will be at Chibuli, Kampala, with branches planned in Mukono (Seeta) and Bolenga (Mwenda Stage). [CONFIRM: spelling and district of the Bolenga branch] We provide plumbing, water-systems, sanitation, farm-water and building services, and we start every project with an underground survey.

1,000+†

villages travelled by our founder

9

service lines, plus the Shark Water Survey

3

offices planned: headquarters and two branches

10,000

livelihoods targeted within five years

† Founder-reported. Supporting field records are being compiled and will be shared with partners on request.

Vision and mission

- **Vision:** reliable freshwater for every village, farm and family in Uganda.
- **Mission:** to survey, supply and sustain freshwater systems, and to create skilled local livelihoods while we do it.

Our promise

Survey-led. Standards-driven. Community-first.

- **Survey-led:** we find the water before we build, and we keep the evidence.
- **Standards-driven:** we build to standard, use permitted and registered specialists, and keep honest records.
- **Community-first:** we employ and train local people, respect the communities we serve and stay on call after the job is done.

Our values

Integrity, credibility and professionalism guide how we work, supported by a commitment to **impact** and **empowerment**. In practice this means we say only what we can prove, we keep receipts, we never pay or accept bribes, and we train and mentor everyone who joins us.

The need we respond to

Water access has improved in Uganda, but the gaps that remain are the hardest to reach, and they fall on rural families, livestock keepers and farmers.

Indicator	What the sources say	Source
Rural households using an improved water source	77.4 per cent in the 2024 census, so more than one in five remain without	UBOS census 2024, as cited in sector material
Rural water points working	84 to 85 per cent functional in the 2016/17 and 2017 sector reports	Ministry of Water and Environment sector performance reports
Kayunga District	Safe water coverage reported at 51 per cent, with about 80 per cent of boreholes and wells working	District water information (date to verify)
Nakasongola District	Access ranges from 5 per cent to 95 per cent between sub-counties, and over half of residents have used unsafe sources	Water Supply Atlas and press reports (date to verify)
The cattle corridor	Recurrent dry spells, acute water scarcity and livestock stress in districts including Nakasongola and Nakaseke	Press and research reports

What this means on the ground: hours lost walking for water, animals lost in dry spells, farms left idle, and water points that stop working because they were built without proper survey or because nobody nearby was trained to repair them.

What Shark does

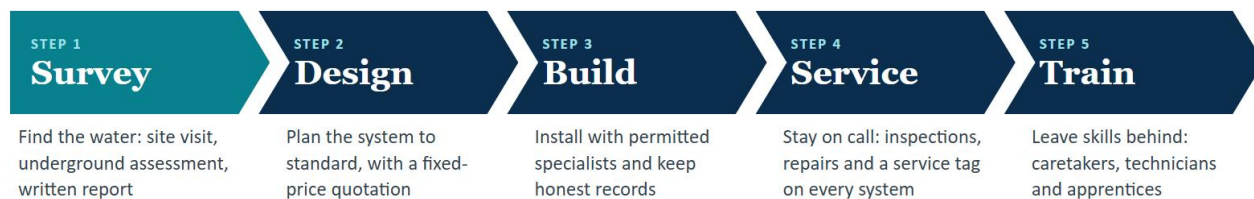

We offer nine service lines and one entry service, the **Shark Water Survey**.

1  Bathroom and kitchen repairs	2  Water pumps and pumping systems	3  Water pipes, all sizes	4  Tanks and solar tank plants	5  Stones and building materials
6  Wiring for water systems	7  Water-lift systems and drainage	8  Septic tanks, manholes and soak pits	9  Farm sprinklers and spray systems	+  Shark Water Survey

Cluster	What we do	Typical clients
Survey	Underground assessment of vulnerable areas, carried out with a registered hydrogeologist partner, with a written report and map	Districts, NGOs, farms, estates, developers
Home plumbing	Bathroom and kitchen repairs (sinks, showers, water heaters); water pipes of all sizes, repairs, fixing and new installations	Households, landlords, schools, clinics, hotels
Water systems	Water pumps and pumping systems, including underground pumping and distribution; tanks of all sizes and solar tank plants; wiring and cable installation for water systems; water-lift systems with drainage [CONFIRM: meaning of "shadoof"]	Communities, institutions, farms, estates, developers
Sanitation and drainage	Septic tanks, manholes, soak pits and drainage systems	Households, schools, health centres, developers
Farms and materials	Electric-powered sprinklers and farm water spray systems; construction stones and materials including terrazzo, tiles, paint, cement, sand and bricks	Farmers, cattle keepers, contractors, homeowners

Borehole drilling is carried out by a registered drilling partner, and electrical work is led by permitted electricians, until Shark holds the relevant registrations itself.

How we work

Step	What our client receives
Survey	A site visit, a written assessment and a map showing where and how water can be reached
Design	A bill of quantities and a fixed-price quotation, with the standards we will follow
Build	Supervised installation by permitted specialists, test records and photographs with place and date
Service	Scheduled inspections, prompt repairs and a service tag on every system
Train	Trained caretakers and technicians from the local community, and a completion certificate

Where we work

Location	Role	Status
Chibuli, Kampala	Headquarters, stores and registered office	Planned
Mukono (Seeta)	Branch for Mukono, Buikwe and Kayunga	Planned
Bolenga (Mwenda Stage)	Branch	Planned
Nakasongola, Kayunga, Nakaseke, Buikwe and other districts	Areas where our founder has worked†	Outreach

Why partner with Shark

- **A survey-led method.** Water is located and verified before money is spent on construction.
- **One accountable partner.** Survey, design, build, service and training sit with one team and one point of contact.
- **Compliance built in.** We work with registered and permitted specialists and keep clear records.
- **Local jobs and skills.** We hire, train and mentor local people, and we measure the results.
- **Open evidence.** Photographs carry place and date, and we are building a public Village Water Register.
- **Real field knowledge.** Our founder has walked the villages we want to serve.

People, jobs and mentorship

Our goal is **10,000 livelihoods within five years**. We count each person once, and we count people who earn an income or a training placement through Shark's work: direct staff, sub-contracted technicians, apprentices, local project workers, village caretakers and committee members, and local suppliers and transporters.

Year	Cumulative livelihoods (target)	What needs to happen
1	200	Register the company, deliver pilot systems, take the first apprentices, start the Village Water Register
2	900	Run district pilots, win a first government or corporate contract, agree a training partnership
3	2,500	Deliver multi-district programmes, staff the second branch, build a network of caretakers
4	5,500	Join regional programmes and NGO consortia, grow the local supplier network
5	10,000	Deliver national programmes and begin internationally funded work

These are planning targets, not guarantees. They depend on partnerships and contracts, and we will report against them every year.

Mentorship and career empowerment. Everyone who joins Shark is paired with an experienced mentor, follows a skills pathway, and is supported to reach registered qualifications. We will prioritise young people, women and persons with disabilities.

Working with communities

- We meet local leaders first and explain what we plan to do.
- We obtain informed consent before collecting information, photographs or stories.
- We hire local people first, and pay fairly and on time.
- We form water user committees and train caretakers, including women.
- We put a phone number on every service tag so that anyone can give feedback or raise a concern.

Our planned organisation

Shark is founder-led today. The structure below shows the team we are building, and where we will partner with registered specialists.

Role	Purpose	Status
Managing Director (Hassan Maweje)	Vision, partnerships, final accountability	In post
Survey and design lead (registered hydrogeologist or engineer)	Survey reports, system design and sign-off	Partner to be agreed
Operations and projects manager	Scheduling, site supervision, quality	To recruit
Health, safety and quality officer	Safety plans, inspections, incident records	To recruit
Permitted electrician	Electrical and solar wiring	Hire or partner
Plumbing and construction team leaders	Site work and apprentice supervision	To recruit
Community engagement and monitoring officer	Consent, Village Water Register, reporting	To recruit
Finance and administration	Records, payroll, procurement, filings	To recruit or outsource
Branch managers (Mukono, Bolenga)	Local sales, supply and dispatch	As branches open
Mentorship and apprenticeship coordinator	Training plans, mentors, placements	To appoint

Quality, safety and ethics

We are adopting four policies, available in draft on request: **Health, Safety and Environment; Code of Ethics and Anti-Corruption; Safeguarding, Gender and Inclusion;** and **Quality and Environmental Management.** We will also follow Uganda's Data Protection and Privacy Act, 2019 when collecting village or customer information.

Registration and compliance status

We believe partners should know exactly where we stand.

Step	Status
Company incorporation with URSB	In progress
Tax registration with URA, and trading licence	After incorporation
Registration on the PPDA e-GP portal for government tenders	After incorporation and tax registration
Drilling of boreholes	Through a registered drilling partner
Electrical installation	Led by permitted electricians
Data protection registration	Planned before large-scale data collection
Insurance, workplace registration and social security	Planned as we hire

Partnerships we welcome

- **Government:** the Ministry of Water and Environment, district local governments and Parish Development Model programmes.
- **Corporates and developers:** companies looking for water, sanitation or community projects they can trust and report on.
- **NGOs and donors:** organisations seeking a local implementing partner with safeguarding and monitoring built in.
- **Suppliers and manufacturers:** reliable sources of tanks, pumps, pipes and materials.
- **Training institutions:** technical and vocational schools that can place apprentices with us.

Start with a pilot

We invite partners to begin with a small, verifiable pilot. Each option produces evidence within months and can be scaled if it works. Prices are quoted after a site visit.

Pilot	Scope	What the partner gets
Survey pilot (about 2 to 3 months)	Survey of 15 to 25 villages in one sub-county with a registered hydrogeologist, and entries in the Village Water Register	A written report and map that a district can plan from
Institutional water pack (about 2 to 4 months)	Water system for one school, health centre or community: survey, pump, tank and tap stand, sanitation check, caretaker training	A working water point with a verification record
Farm and livestock water demonstration (about 3 to 4 months)	Solar pump, storage tank and watering points or sprinklers for a farm or farmer group	A demonstration site and a farmers' field day

Timeframes are indicative and depend on approvals and site conditions.
